

Final Project

Executive Summary

Every year at company which I will title *Smart Solutions* (to keep their financials confidential), the company has to go through a long, drawn-out process to produce the Annual Operating Plan (AOP). This consists of all revenue and expense projections from which the company will be held accountable.

The process requires that every department head submit their projected budget for the upcoming year. Up to this point, there hasn't been a formalized spreadsheet where the department heads could submit their projected heads. Instead, they have been given a blank Income Statement and have been tasked to complete the Income Statement for their respective department.

Given the complexity of an Income Statement, there has been much confusion over the past few years during this annual planning cycle. Department heads have been hoping for a simpler solution to complete this annual process.

The solution to the problem is the project submission. Instead of having to convert all of their expenses into an income statement, the template instead allows department heads to easily input relative expenses in categories. The layout is easily understood allowing managers with little to no experience to effectively budget for their upcoming year.

After department heads input their relative budgets, they can then select a button in the ribbon which will automatically calculate their Income Statement. After doing so, the managers can then click another button which will download historical journal entries from an external spreadsheet, calculate a historical Income Statement, and then allow the department heads to compare next year's budget with the current year's actual expenses.

Implementation

To begin, I had to build an easy to use interface for department managers to input their respective budgets. I wanted to make it intuitive and easy to use so that managers with little to no financial statement experience could still complete their budget without assistance from the finance team.

Department: <input type="text" value="INPUT DEPARTMENT HERE"/>				Jan-13				Feb-13				Mar-13				Apr-13			
Budget Owner: <input type="text" value="INPUT DEPARTMENT HEAD HERE"/>																			
Name	Salary	MBO	Start Date	Input Vendor and Monthly Expense															
				1															
				2															
				3															
				4															
				5															
				6															
				7															
				8															
				9															
				10															
				11															
				12															
New Hires				Software License Purchases															
Name	Salary	MBO	Start Date	Exclude Current Licenses															
				1															
				2															
				3															
				Travel															
				Airfare															
				Hotel															
				Transportation															
				Meals and Entertainment															
				Marketing Expenditures															
				1															
				2															
				3															
				4															
				5															

After completing the form spreadsheet, there is a button that managers can click to automatically calculate their respective Income Statement

After clicking this button, a year-long income statement will be automatically produced

A1															
	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
1															
2		Department													
3		In actual dollars													
4															
5		Salaries and Wages													
6		Payroll Taxes													
7		Benefits													
8		Legal and Accounting Expenses													
9		Marketing and Public Relations													
10		Outside Services													
11		Telecommunications													
12		Travel													
13															
14		Total Operating Expenses													
15															
16		Change from 2012													
17															

In order to give managers perspective, to ensure their estimates are in the right ball park, there is a button that managers can click that will connect to an external database, pull down tens of thousands of journal entries, and will calculate the current year's actual Income Statement.

Discussions of Learning

I used a variety of the elements that I have learned during the semester in order to successfully complete this project. First and foremost, I learned how to connect to an external database/spreadsheet. I had to pull journal entries from a database that is in constant flux. Entries are added on an almost daily basis adding an element of complexity.

I also had to decipher how to input formulas to calculate a tab from data on in a separate location. This required quite a bit of code writing given the 96 cells which required input.

Additionally, I had to deal with automatic alerts and errors when running my code which had to be disabled then re-enabled.

Lastly, I also spent a large portion of time building the infrastructure for the spreadsheet to make it aesthetically appealing for the end business user.

Assistance

I received no outside assistance on my project. I wrote all of the code myself. Additionally, I received no internet assistance.
