

VBA Final

Creating Holiday Calendar Events

By Herbert Hosman

Executive Summary

My project gave me the joy of running into many brick walls metaphorically speaking of course. I had to pivot my idea many many times to reach my current project. I will leave that summary for the discussion of learning and conceptual difficulties encountered portion.

Description of the Biz

This is in reference to a problem I faced at an internship last Summer was co-worker that were inexperienced with technology and calendar events. Pretty much all companies use calendars. Most people use Microsoft Outlook®, but there are a select few that go against the stream. Generally speaking, most desktop and many online interfaces manage calendars and emails quite nicely. The annoying part is that they all do it in different ways that are not always intuitive. This is where my project comes in.

Overview of the System I Built

My system is great for situations like this! It really gets back to basics for those people who like hard file and are afraid of the cloud or syncing. A company can decide their holidays or days the want (which are holidays in my book) and they can distribute a file that contains them all. The nice thing is they can do it all from one place that is easy to use.

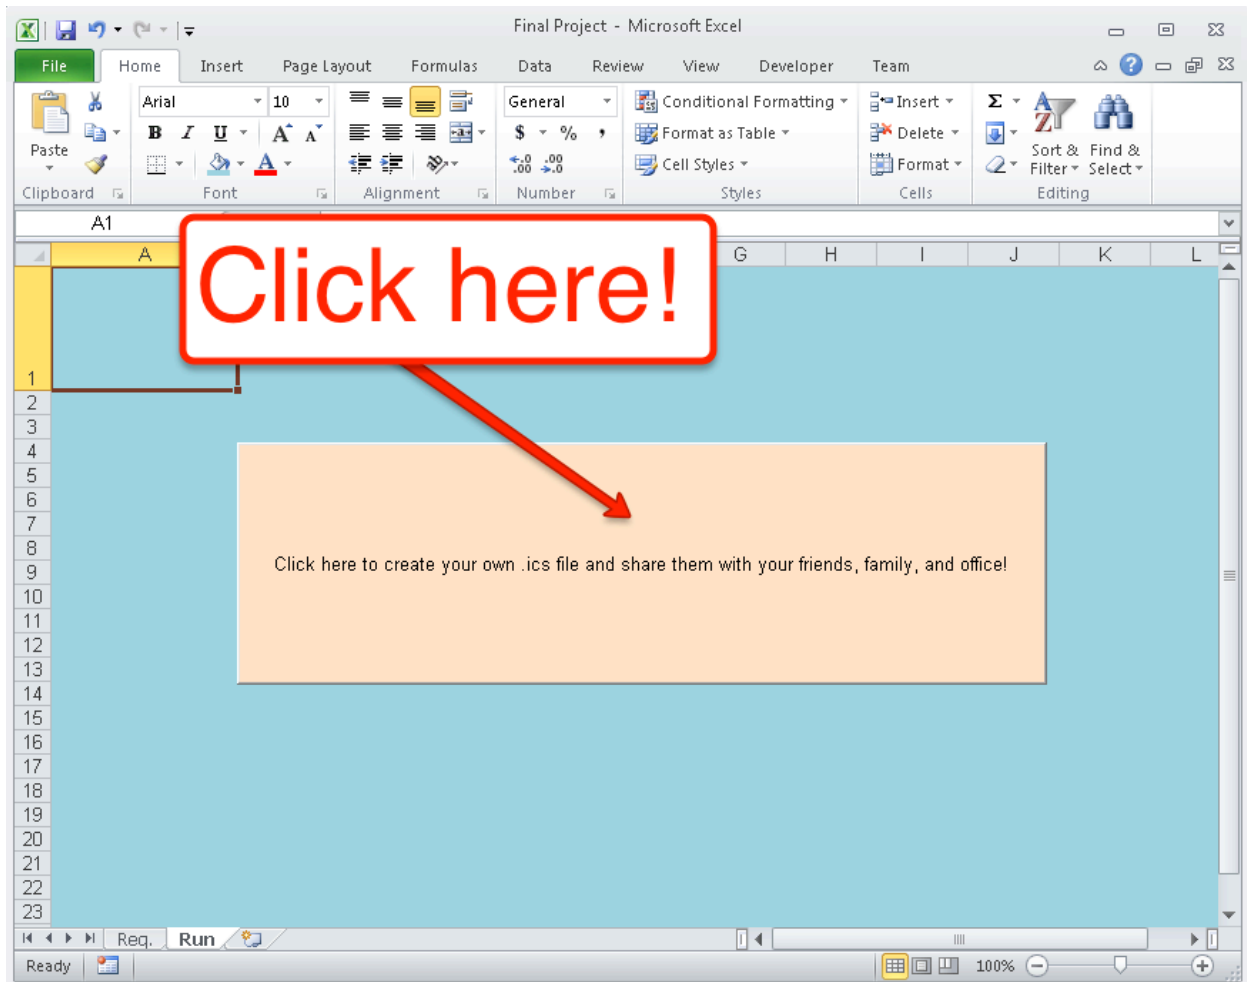

This program...

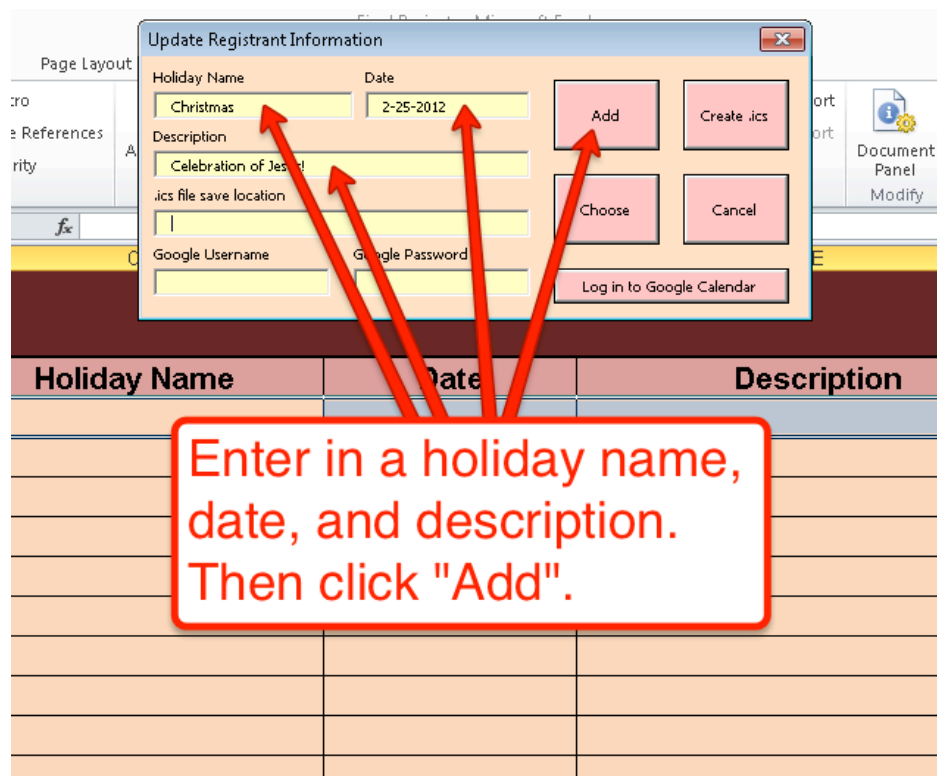

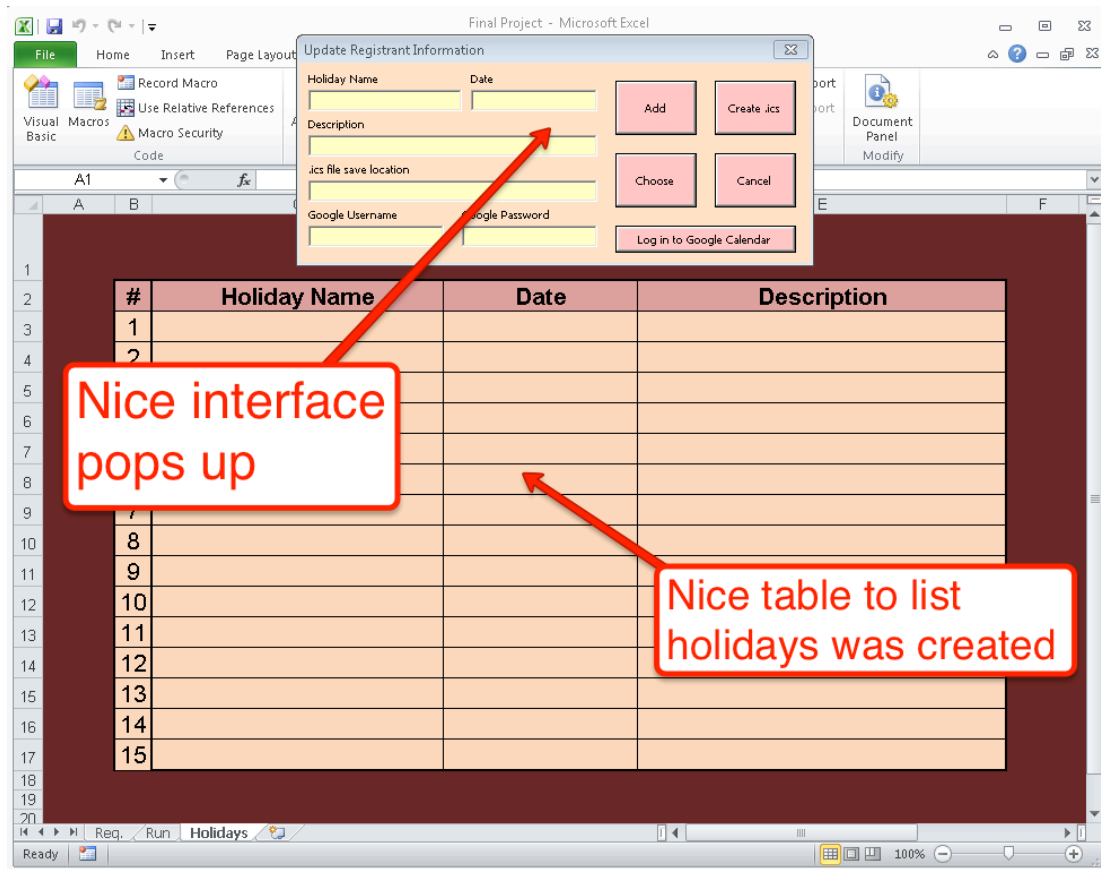

- Runs at the click of a button
- Create the necessary pages on the fly
- Opens a nice user interface to do all the needed
- Visually displays results as your creating events
- Allows you to designate a file path you would like
- Create a .ics file with all holidays you created
- Allows you to cancel out of the interface
- And will even open IE and log into Google Calendar for you

The following pages will walk you through the easy process!

How to Create Your Own Holiday Calendar

Once the workbook is opened, you should see an incredibly large button. Click it! You know you want to! Notice, beside the project requirements page it is the only page currently.

Update Registrant Information

Holiday Name: Date:

Description:

iCalendar file save location:

Google Username: Google Password:

Buttons: Add, Create .ics, Choose, Cancel, Log in to Google Calendar

#	Holiday Name	Date	Description
1	Christmas	2/25/2012	Celebration of Jesus!
2			
3			
4			
5			
6			
7			
8			
9			
10			
11			
12			
13			
14			
15			

You'll notice that your holiday was added to the list and the used fields were cleared. Now repeat the process to fill up your holiday list!

Update Registrant Information

Holiday Name: Date:

Description:

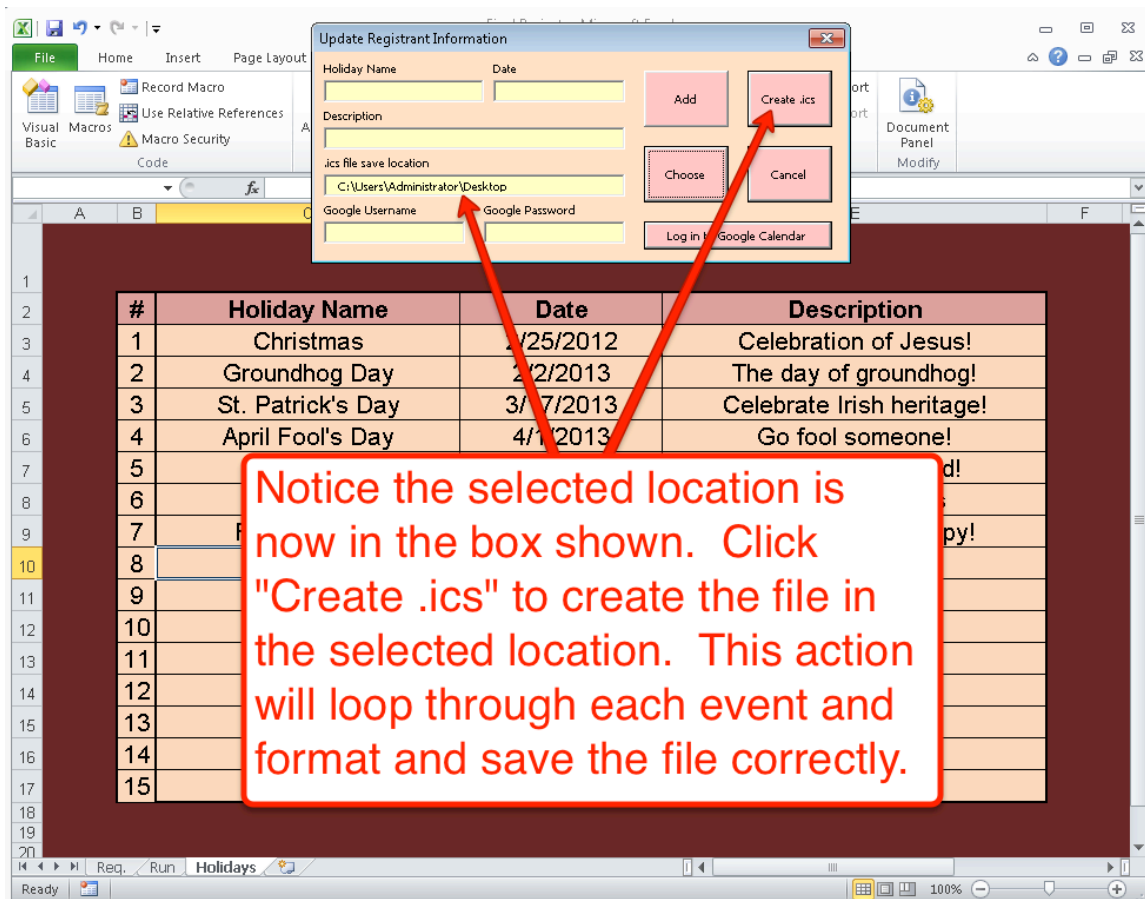

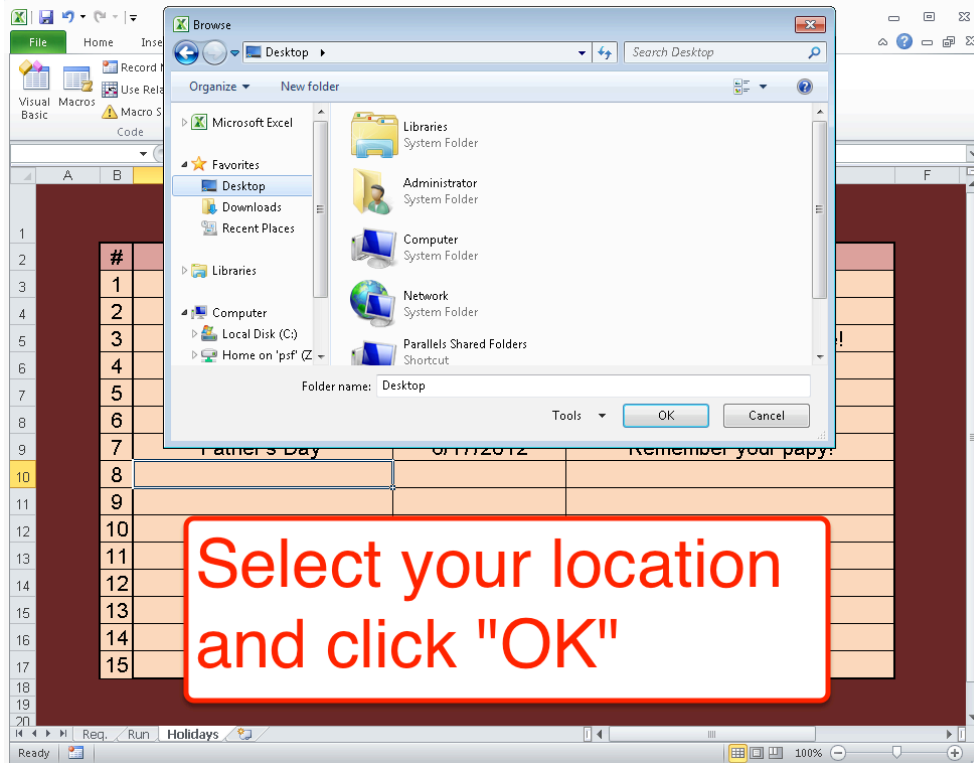

iCalendar file save location:

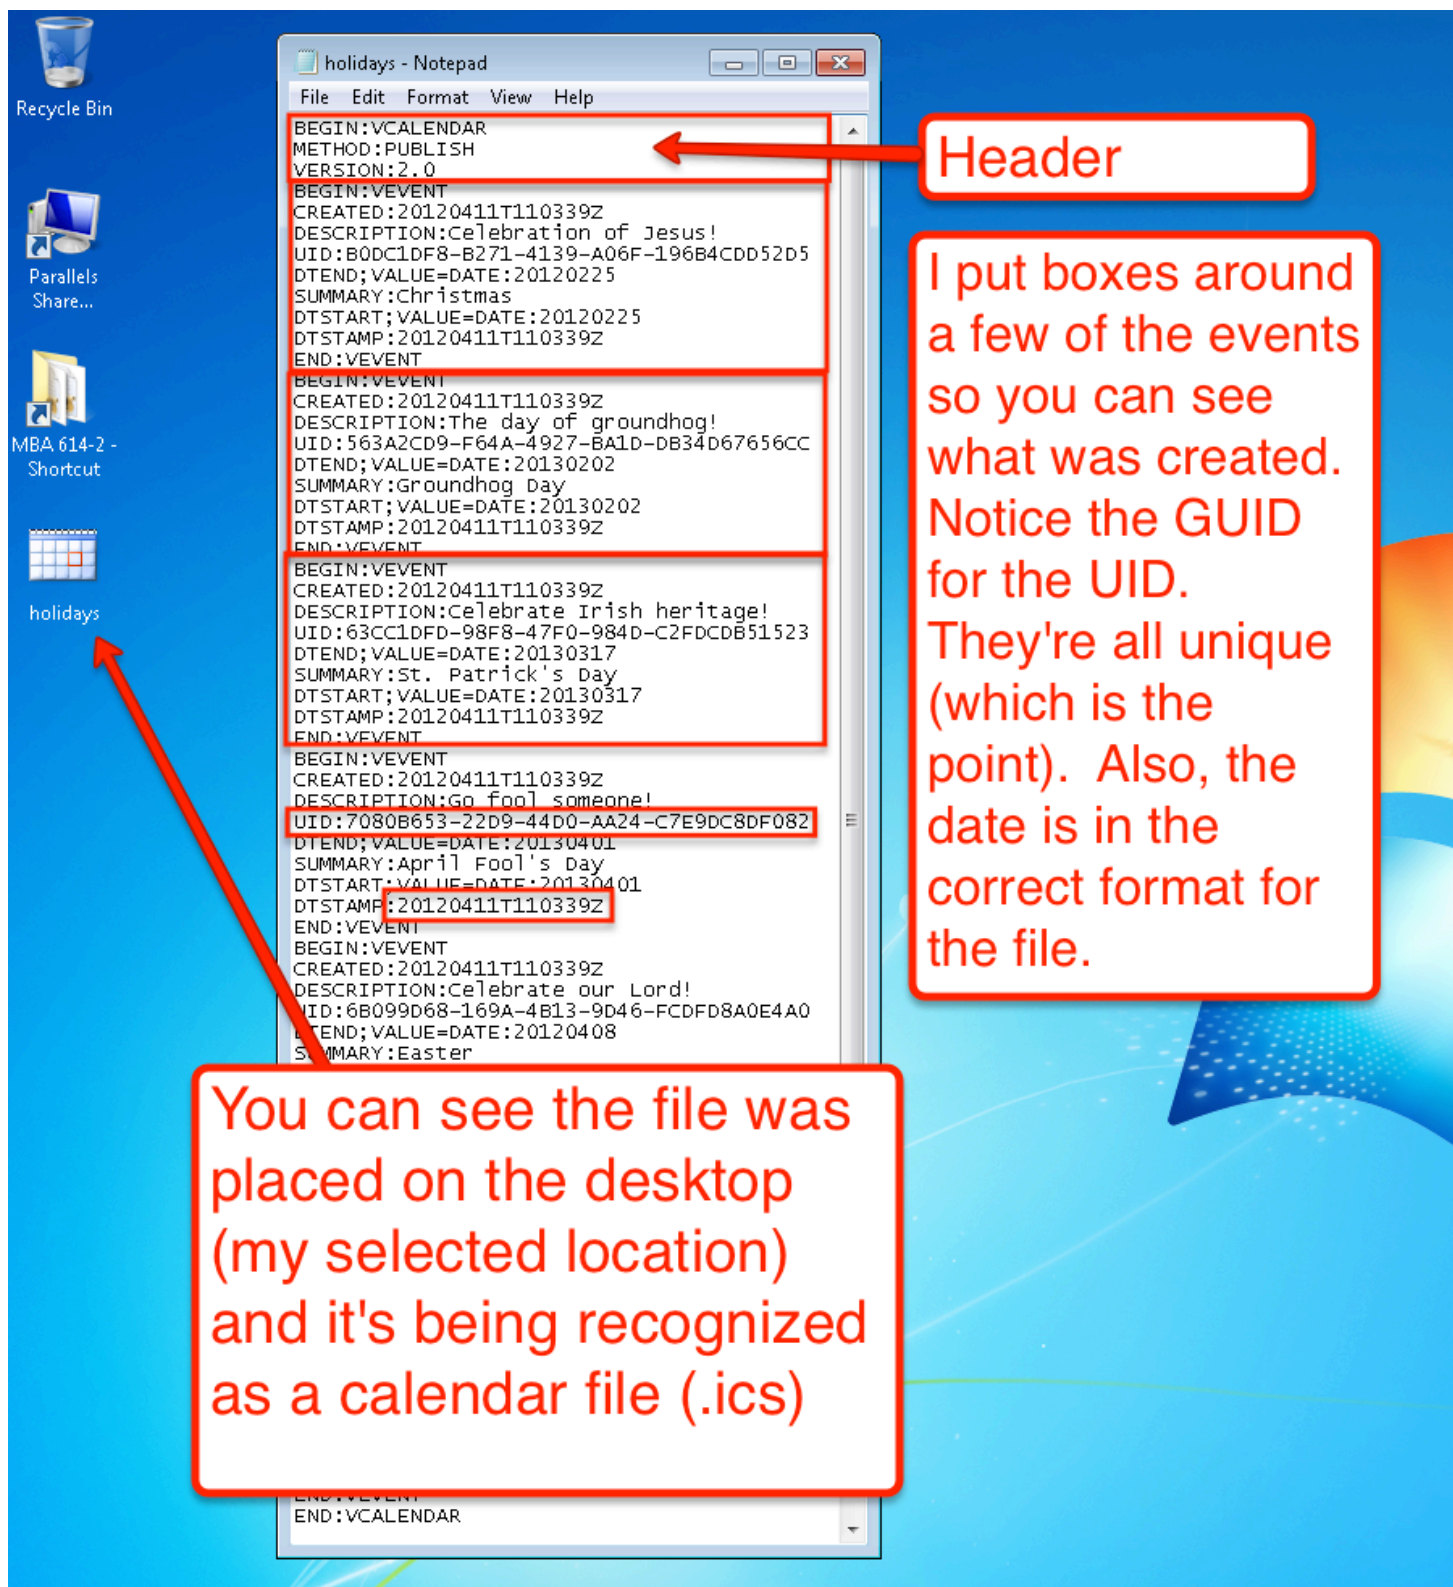

Google Username: Google Password:

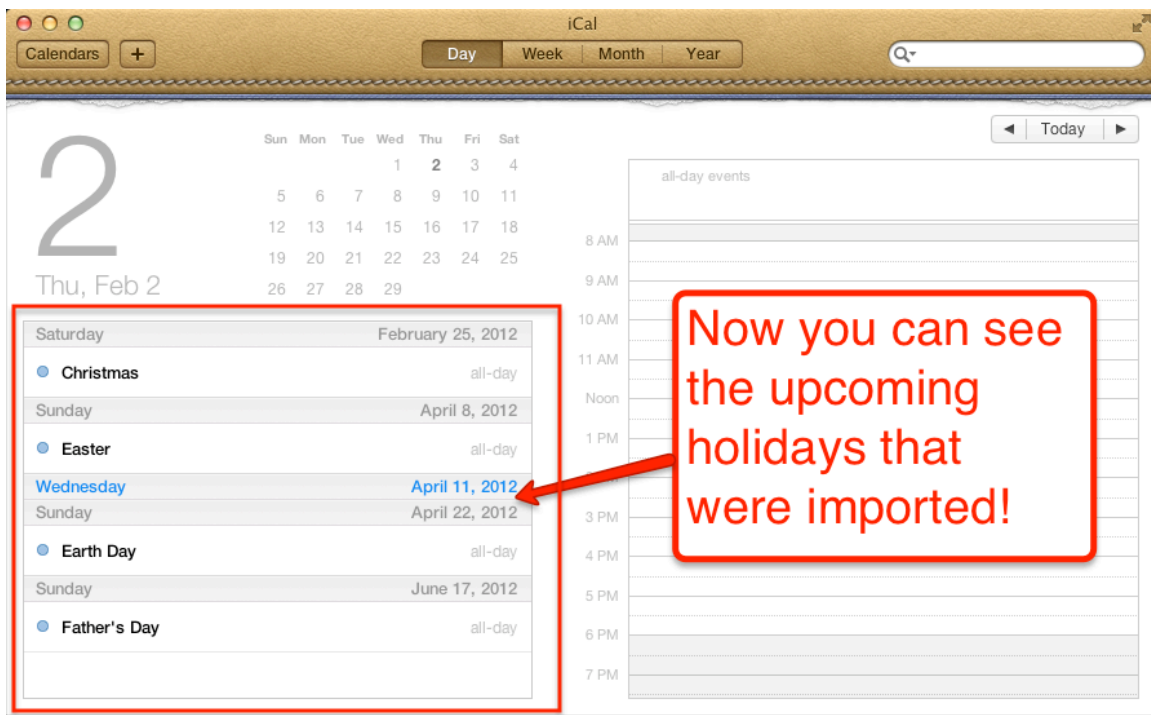

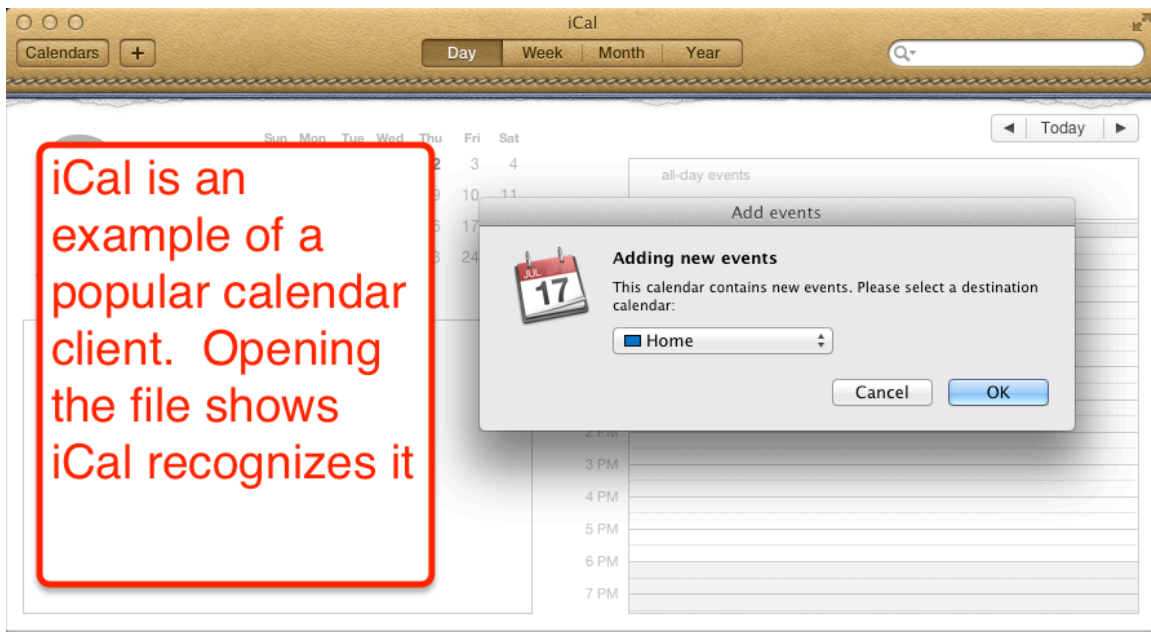

Buttons: Add, Create .ics, Choose, Cancel, Log in to Google Calendar

#	Holiday Name	Date	Description
1	Christmas	2/25/2012	Celebration of Jesus!
2	Groundhog Day	2/2/2013	The day of groundhog!
3	St. Patrick's Day	3/17/2011	Celebrate Irish heritage!
4	April Fool's Day	4/1/2011	Go fool someone!
5	Easter	4/8/2012	Celebrate our Lord!
6	Earth Day	4/22/2012	A day for hippies
7	Father's Day	6/17/2012	Remember your pappy!
8			
9			
10			
11			
12			
13			
14			

Once you're done adding any number of events click "Choose" to choose where you want to save your file.

Update Registrant Information

Holiday Name: Date: Add Create .ics

Description: Choose Cancel

ics file save location:

Google Username: Google Password: Log in to Google Calendar

Finally, I wanted to show that entering your credentials and clicking "Log in to Google Calendar" take you right to it so you can import you .ics file

Further Notes

Here is a list of things I had to do to accomplish my project if the screen shots don't offer enough distinction.

- Create and design an ActiveX button to run the macro and call the form from the macro
- Create a macro to create, style, format, and name the holidays worksheet
- Create and design a form including naming the objects correctly to reference.
- Create a sub to add the holiday to the worksheet and go to the next open space
- Create a cancel button to exit the form (not in screenshots)
- Create script to open a file browser and return the selected location to a text field
- Create script to create the .ics file
 - Used references to worksheet
 - Looped through list of events, but stopped at the last event
 - Put it into the correct format for the .ics file, including changing a date format
 - Created a GUID for the UID
 - Opened with a header and closed with a footer
- Made sure it was compatible with Google Calendar, Outlook, and iCal.
- Using your agent class, opens a browser, goes to google calendar, and fills out the form and submits.

See code for additional detail.

Discussion of Learning and Conceptual Difficulties

This project was a pretty big roller coaster as I hinted to in the executive summary. I out with the idea to create calendar items on Google Calendar by using your agent class and taking them from excel. I quickly found out that is easier said than done. The brick wall I ran into was that Google Calendar uses so much JavaScript. This makes it hard to pin down id tags. This in turn makes it hard to navigate the page. Google no longer has a readily accessible html version that I could locate of Google Calendar. From there I pivoted to an .ics file because of an experience I mentioned earlier from an internship.

Besides that major thing, it was really just learning new things and filling in the pieces I missed when I wasn't in class. A few example of this are learning how to change date time formatting, writing to a file, learning how .ics files work, figuring out what's important in .ics file and what is client specific, creating a GUID and learning what it really is, using a file browser, manipulating a website, realizing what is JavaScript and what's not, etc.

I generally turned to the Internet for all of my answers and that worked really well. I did all the work and never worked with classmates. I found the project very difficult and time consuming. I spent 35+ hours on it. Overall, it was a great experience and really brought my understanding together and filled in the gaps. Thanks for the opportunity to do it. I hope you're feeling better by the time you read this Gove.
